

ENTR851 Project Report Template

Title (Font 16)

Ying Chen (font 12)

yingchen@sfsu.edu

Student ID: 123456

11/19/2006

Abstract (around 100 words) Please briefly explain the background of your project, what you did for this project, and what its significance is. (font 12)

1. Introduction (font 12)

Please start with what technical gap exists in the current trend, and how your project contributes to close this gap.

Please briefly explain your project and results but with more details than the abstract. At the end of this paragraph you need to point out the significance/usefulness of the project.

In the last paragraph of the introduction section, you need to describe the structure of the rest of the report, such as ‘...the background of this project is explained in section 2, ...’ (font 12)

2. Background

Please write about what related works people has done and refer to the references you list in the reference section.

Please distinguish your project from all the related works by describing the differences.

3. Experimental Method

Please explain your experimental method, such as a new algorithm.

4. Experimental Setup

Please explain how you conducted your experiment, such as tools (software and hardware).

5. Experimental Results

Please list your experimental results using statistics in a table and/or graphics, and explain in details what these results mean.

Do they support your arguments as the significance described in section 1? If so, how? If not, why?

6. Conclusions

Please conclude your project with a structure similar as section 1 but with more focus on your experimental results and draw the conclusions of your project.

Acknowledgements

If you want to thank anyone who provides support, help and constructive suggestions this is the section. It is like the credit part at the end of a movie.
